PROFILE

I test applications across Android, iOS and Huawei. I assess stability, reproducibility and the impact of defects on user experience, with attention to UX/UI and application behavior and logic.

End-to-end product validation: from requirements and test documentation to release regression, analytics and monitoring.

EXPERIENCE

July 2025 — Present

Glam AI — QA Specialist

- QA at Glam AI, a top-10 Photo & Video app on the App Store worldwide: 18M installs and 2M monthly active users (MAU).
- Kept sales funnels and subscriptions bug-free (paywalls, purchases, trials, renewals, cancellations, bank-card payments), supporting revenue, retention and new-user growth.
- Improved Daily Shots: reuse among paying users grew from 7% to 58%.
- Used AI assistants daily: code review with Claude, test-case and documentation writing, automated checks.
- Improved QA processes and task management in Notion, speeding up the team's work.
- Manual testing of the iOS app, APIs and backend integrations, including AI/ML photo and video features; functional, regression, smoke and exploratory testing for weekly releases.
- API and backend testing with Postman, Charles Proxy and Proxyman.
- Command line, build installation and verification (Xcode, TestFlight), Git and CI/CD releases.
- Investigated and reproduced production defects with iOS, backend, ML, support and product teams.
- Firebase, Bugsnag, Adapty and Amplitude to validate stability, subscriptions and product flows.

GEVORK AKOPYAN

QA Engineer (Mobile / Games)

EXPERIENCE

October 2023 — May 2025

Playrix — QA Specialist

- LiveOps testing: events and regular updates that supported player-base growth
- Fewer bugs from release to release and stable builds
- Monetization and in-app purchase testing: improvements lifted purchases by 10%
- Manual testing on iOS, Android and Huawei
- Requirements analysis and decomposition to verify specification compliance
- Test cases, checklists, test plans and bug reports in Asana
- A/B testing and analytics-event validation in Amplitude and Swrve
- Server-side and client-side logic testing and release regression
- Traffic analysis, request interception and modification with Charles Proxy
- Crash and non-fatal error analysis in Sentry
- Git-based test-server changes for environment and event setup

April 2023 — August 2023

Playgendary — QA Specialist

- Manual testing on Android and iOS
- Analytics testing with Adjust raw data and Firebase configurations
- Identified 60+ defects per month as part of KPI
- Build installation, logging and verification in Android Studio and Xcode
- Bug reporting in Asana and version-control work with Git
- Test documentation and test-run updates in TestRail
- Production releases and subsequent status monitoring

March 2022 — April 2023

DominiGames — QA Engineer

- Manual functional and non-functional testing on Android and iOS
- Internal feature testing and alpha/beta project testing
- Firebase Analytics, reporting, test plans and test documentation
- Project builds in Jenkins
- User-complaint tracking through Helpdesk
- Intern training and Team Lead replacement

SKILLS AND TOOLS

Documentation: TestRail, Qase, Confluence, Coda, Notion.
Testing and releases: iOS, Android, Huawei, Android Studio, Xcode, TestFlight, 3uTools, Jenkins, CI/CD, GitHub.
Analytics and stability: Amplitude, Swrve, Adjust, Firebase, Sentry, Bugsnag.
API and product: Charles Proxy, Proxyman, Postman, Adapty, Git, Asana, HelpShift.
